

English version

Goal of the project

Create a platform that unites students in teams to jointly solve the tasks

Problem

The main idea of our project is to find like-minded people to create a team and jointly solve their tasks, be it a case, a project, a startup, a student laboratory, etc. Quite often, when working in a team, there are not enough professionals in a particular industry, which leads to low results and low productivity. To work on innovative projects, the platform allows you to create the most effective teams. We are moving to advanced digital technologies in the organization of student teams

Objective

1. Pre-project planning
Acquaintance with the project, clarification of goals and objectives. Definition and analysis of the target audience. Competitor analysis. Scheduling work. Formation of a working team. Development of technical specifications, including design requirements and requirements for the technical part of the project. Site architecture development. Site prototype creation
2. Development and harmonization design
Development of the main graphic concept of website design on the example of the main page. Creating graphic templates for typical site pages based on an approved design concept
3. Page making
Editing of html-pages of the website based on the confirmed design of the pages
4. Programming part of the project
integration of the site with the management system, setting of the server, maintaining the security of the project
5. Website content
Website content with necessary photos and content
6. Website testing
Testing of the website for malfunction discovery, testing the accuracy of the functioning of html-pages in different browsers
7. The launch of the project
Placement of the project on the domain in the internet
8. Supporting and promoting website
Ensuring high attendance. Further development of the site

Technologies used

HTML5/CSS3, JavaScript, jQuery, Less, Git, Adobe XD, Adobe Photoshop, Illustrator

Results

At the moment, pre-project preparation has been completed, a prototype has been created, the website design has been developed and agreed, HTML pages have been laid out on the basis of the approved design and the platform has been launched on

Further development

In the plans: integration of the site with the management system, programming, server configuration, database connection, site security, functional improvement, site content content, site testing for correctness in different browsers and on different platforms

The project launch date is August 31, 2019. Leave your contacts by filling out the google form on the link to qr-code or by writing us an e-mail and we will notify you as soon as we launch the platform

Team

Alexander Rubenov
Programmer, HTML-coder, project manager

Victoria Mihienkova
Usability and optimization specialist, planner, designer
